Hi, I’m Ana Paola

I believe good systems make room for creativity, not control it.

Linkedin Contact

Who am I?

I’m currently working as a Senior DesignOps Coordinator at Electrolux Group, leading global Wellbeing and SDA design operations. My role focuses on streamlining workflows, optimizing resource allocation, and fostering cross-functional collaboration to deliver impactful, high-quality design outcomes. With a background spanning design operations, marketing, and communications, **I bring a data-driven, collaborative, and continuous-improvement mindset to every project.**

MY STRENGTHS

- Resource Allocation & Budget Management
- Cross-functional Team Leadership
- Data Analysis (Excel, Power BI)
- Workflow Optimization
- Workshop Facilitation
- Brand Strategy & Research
- Awards Coordination
- Event Planning & Coordination
- Marketing & Communications
- Iconography Management
- Stakeholder Management
- Problem-Solving & Adaptability

Side facts about me...

From	Peru 🇵🇪
Speak	Spanish 🇪🇸, English 🇬🇧, Portuguese 🇵🇹, French 🇫🇷
Secret Talents	Know a lot about medicine & the human body 🧬
Permitted to	Drive a car 🏎️ & make coffee ☕
First jobs	Helped my mom in the pharmacy (7 yrs), Read the bible to kids (10 yrs), danced on competitions (13 yrs), worked as a barista (18 yrs)
Love	My 5 rescued dogs & Tiramisu
Goals	Work for governments as a consultant

Agenda?

1. Power BI Dashboards for Budget & Utilization 5-16
   → *Implemented budget and utilization tracking for the Wellbeing category.*
2. Team Strengths & Gaps Analysis 17-23
   → *Led review to identify capabilities and skill gaps.*
3. Design Awards Submission Workflow 24-32
   → *Introduced streamlined submission process.*
4. Brand Expression Research 33-40
   → *Directed research to refine brand positioning.*
5. Design Strategy Deliverables (coming soon) 41-50
   → *Leading creation of strategic design documentation.*

01

Power BI Dashboards for Budget & Utilization

Built a data-driven decision system in Design

Context & Problem

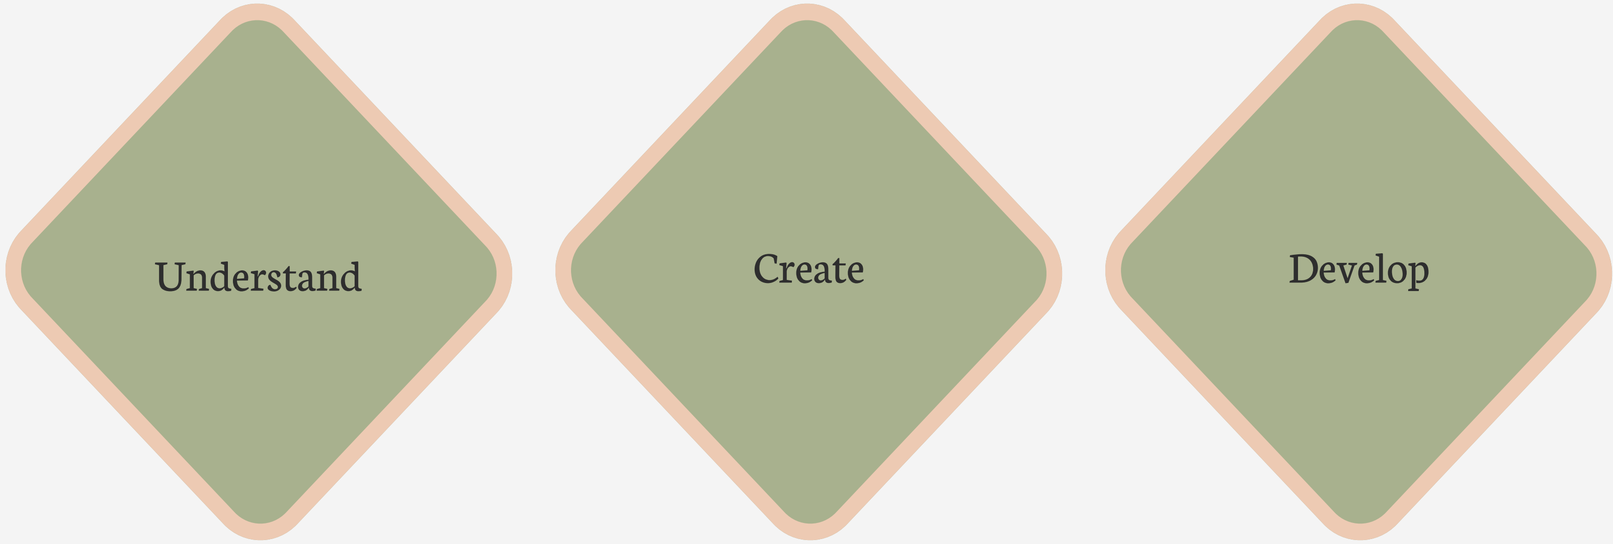

- Design team of 30 designers with 50+ ongoing projects at the same time
- Area with 5 leads who needed support managing their teams
- Designers report time in Smartsheets but data is not friendly visible ofr managers

Challenges

- No clear visibility into when project demands would exceed team capacity
- Uncertainty around how many projects we could realistically take on
- Lack of visibility into resource allocation in advance
- Design leads couldn’t easily anticipate overbookings or debt
- Manual reporting wasted time
- Reports were too general, lacking details on how we were using people or budgets
- No clear KPIs to measure team or budget utilization

My Role & Actions

I use the triple diamond design thinking structure to address big initiatives or problems in my area, which will share here

U C D

Undestand

- Discussed with managers across the area to identify their reporting needs and pain points.
- Performed benchmarking with other internal departments and external companies to analyze how they leverage reporting data, including chart types, visual formats, and tools used.
- Collaborated with DesignOps peers from other product lines to compare challenges and share solutions for improving data visibility and reporting consistency.

U C D

Create

- After benchmarking and understanding what kind of data and KPIs we need to show, we decided that PowerBI will be the best tool.
- To bring the dashboard to life, I began designing the layout and visual hierarchy in a way that would make complex information feel simple and actionable.
- Since I wanted to create something functional and scalable, I started learning Power BI through online tutorials and hands-on experimentation.
- After several weeks of trial and error, and discovering how helpful LLMs could be in accelerating the process, the dashboard finally came to life. What began as an exploratory project evolved into a functional, data-driven tool that clearly visualizes our team’s capacity, utilization, and dependencies across projects.

U C D

Develop

- The first version of the dashboard was presented to the area managers, who found it very useful for visualizing workload distribution and identifying bottlenecks. They provided valuable feedback on specific metrics and visual details, which I incorporated into the following iterations.
- Today, the dashboards are actively used in planning and decision-making meetings to allocate design resources more effectively across projects. They have become a key reference point for understanding capacity, balancing workloads, anticipate debt to other areas, and supporting data-driven discussions within the team.

Read It. Loved It. Let’s Discuss ☕
